

PRODUCT DATA SHEET

PRODUCT	: CARRAFLOCAID [®]	
VERSION No.	: 5.0	DATE: 04/03/2026

Introduction:

CARRAFLOCAID[®] is a refined kappa carrageenan from the seaweed species.

Kappa isomer of Carrageenan is long proven over decades the most cost-effective ingredient for brewing wort clarification in the brewing industry. When added to boiling wort, **CARRAFLOCAID[®]** reacts strongly with soluble proteins, notably the proline-rich haze precursor fraction. When the wort is cooled the carrageenan-protein complex becomes unstable and precipitates out of solution which is called "TRUB". The clear wort that results produces a beer with better filterability and physical stability. Wort recovery from the whirlpool vessel with a clear wort free from Trub plays an important role in improving overall efficiency of the brewing process.

CARRAFLOCAID[®] a Hydrocolloid based natural product which enables a good hot and cold break. Enabling formation of compact trub.

Benefits

- Increases wort recovery by improved hot break formation.
- Improved Yeast Vitality.
- Smooth beer filtration with higher filtration throughput.
- Improved Physical stability of beer in Shelf life.

Application Conditions

- Prepare a suspension by dispersing the **required quantity of CARRAFLOCAID[®]** in 1 liter process water in a clean container.
- For E.g. If the Brew length is 100 HL, weigh 400 G and disperse in 1 Lt Process water.
- Added to the Wort kettle 10 minutes before the end of BOIL.
- Dose rate which should be optimized in the range of 4 to 5 g/HL.
- Optimize the dose rate basis, the compact settlement of trub as a cone in Whirlpool after wort transfer, monitoring the Imhoff cone procedure by taking 1 L hot wort after the rest time in whirlpool and measure the trub settled as ML versus the wort clarity.

Example of trub separation after wort transfer in Whirlpool:

- Variations in grist make-up, malt quality, brewing liquor, and plant operation all have a major impact on the carrageenan requirement and the desired result of clear wort and compact Trub.

Storage Conditions and Packaging:

CARRAFLOCAID® MUST BE STORED at temp. $25\pm 5^{\circ}\text{C}$ and $35\pm 5\%$ humid conditions.

It is best if used before 24 months from date of manufacturing.

Note: Please note that recommended storage conditions must be strictly followed.

It is available in 25KG HDPE Drums.

All our products, conform to the standard FSSR, 2011 (The food safety and standard regulation, 2011 as amended by regulations, 2016). FSSAI LICENSE NUMBER – 10015043001372.

Carrageenan is permitted for use as a food additive and processing aid Authorized under European Parliament and Council Directive 95/2/EC. E407a.
