

PRODUCT DATA SHEET

PRODUCT	: FLOCAID [®]	
VERSION No.	: 4.1	DATE: 01-04-2018

Introduction:

FLOCAID[®] provides a solution to reduce process costs and time and improves the quality of the finished beer.

FlocAid[®] is a free-flowing powder which is insoluble at finished beer pH.

It re-dissolves in the beer when added at pH 3.8-4.4. and promotes the rapid flocculation that accelerates the settling of the yeast cells to the bottom of the tank.

Benefits:

- FlocAid[®] reduces the cost of the storage vessels and refrigeration.
- FlocAid[®] minimizes the use of other filter aids.
- FlocAid[®] helps in better compact sediment occupying approximately 1% of the beer volume. Thus reduces the carryover of the cell and cell debris, and boosts filtration efficiency.

Application Conditions:

- The recommended dose of FlocAid[®] for Lager Beer is between 2-4 g/HL. 0.5 to 1% w/v solution of FlocAid[®] is prepared using Distilled water or water with low hardness of temperature of 6-12 °C using a simple mixer.
- This solution is normally added during the transfer of the beer from the fermentor to storage tank. Continuous dosing into minimum 75% transferred beer is preferred. The carbon dioxide pressure of the treated beer has no adverse impact on the performance of the FlocAid[®].
- The following precautions must be taken to achieve the optimum performance:
 - a) The FlocAid[®] solution must be used within 24-36 hours of preparation and kept below 20 °C. No other ingredients should be added to the FlocAid[®]
 - b) We recommend the optimization of FlocAid[®] on regular intervals. The procedure is available on request. The optimum addition rate will vary from one beer type to another.

Storage Conditions and Packaging:

FlocAid[®] can remain usable for 12months if stored at temp. $25\pm 5^{\circ}\text{C}$ and $35\pm 5\%$ humid conditions

It is available in 25kg HDPE Drums.

All our products, conform to the standard FSSR, 2011 (The food safety and standard regulation, 2011 as amended by regulations, 2016)
