

PRODUCT DATA SHEET

PRODUCT	: FERMAID-B	
VERSION No.	: 4.2	DATE: 01-11-2019

Introduction:

FermAid-B is an optimized formulation of Biochemical and Nutrients to improve the fermentation of brewery wort especially with higher adjuncts.

In the present scenario, where the breweries are compelled to work under best of efficiencies due to competitive atmosphere in the industries, new technologies are most sought after.

One such technology is to improve the fermentation quality. In this effort, industries are opting to use yeast cultures which are designed to produce quality beer.

These cultures being much specialized tend to be very fastidious with regards to growth conditions and nutrient requirements.

FermAid-B supports yeast to produce quality beer with appropriate fermentation attenuation.

Benefits:

- Reduces early yeast flocculation.
- Ensures vigorous yeast fermentation and thus prevents the growth of contaminating organisms which may produce off flavor in the beer.
- The yeast requirement may be reduced.
- Eliminates sluggish fermentation which may bring about stuck fermentation.
- Increase in FAN level in wort: **FermAid-B** dosage of 10g/HL improves the Free Amino Nitrogen levels by 30%.

Application Conditions:

Under normal wort fermentation conditions of pH 3.5- 6.5 & temperatures of 10⁰ C - 40⁰ C

FermAid-B is effective at concentrations of 10-20 g/HL wort

- 1) **FermAid-B** may be added in the fermentation tank. It should be added along with the feeding of seed into the fermentation tank. It may be added in the media used for scaling up the yeast culture.
- 2) **FermAid-B** may be added in the Wort Kettle to avoid contamination issue during handling.

Storage Conditions and Packaging:

FERMAID-B MUST BE STORED at temp. $25\pm 2^{\circ}$ C and <35% humid conditions

It is best if used before 12 months from date of manufacturing

It is available in 25kg HDPE Drum
