

PRODUCT DATA SHEET

PRODUCT	: FERMAID™ P	
VERSION No.	: 4.1	DATE: 01-04-2018

Introduction:

Due to rapid improvement in the sugar factories resulting in varied grade molasses quality being made available to the distilleries and a highly competitive atmosphere and pressure from the environment groups (NGO's and Pollution control Board).

In this effort, industries are opting to use yeast cultures that are high alcohol/sugar resistant and moving towards zero discharge. Under zero discharge policy industries are forced to incinerate the spent wash. The condensate generated during the spent wash is cool down to the ambient temperature and used to dilute the molasses. This process reduces the fermentation efficiency significantly in due course of time due to increase in free fatty acid content in the condensate water due to recycling.

FERMAID™ P is a specially designed product consisting of specialised Biochemicals to improve and maintain Fermentation Efficiencies during use and reuse of condensate water for dilution of molasses..

Benefits:

- Increased Alcohol yield and Fermentation Efficiency.
- Increased Biochemical activity of the yeast.
- Substantially reduces excessive foaming.
- Reduction in fermentation time.
- Prevents by-product formation.
- No negative impact on the quality of alcohol.

Application Conditions:

It is designed to perform best under normal distilling conditions of pH3-5.5 and temperatures 20-45° C.

A total dosage of 5-8 ppm of wash (i.e. approximately 15-24 gms/ MT molasses) to be added in 2 stages for optimum benefit.

- Pre fermentation: 8-10gm/cubic meter wash.
- Main fermentation: balance 5-8gm/cubic meter wash.

Storage Conditions and Packaging:

FERMAID™ P MUST BE STORED at temp. $25\pm 5^{\circ}\text{C}$ and $35\pm 5\%$ humid conditions

It is best used before 12 months from the date of manufacturing.

It is available in 25 kg HDPE drums.

All our products, conform to the standard FSSR, 2011 (The food safety and standard regulation, 2011 as amended by regulations, 2016)
