

PRODUCT DATA SHEET

PRODUCT	: SOLUBAID AS	
VERSION No.	: 1.0	DATE: 01-10-2019

Introduction:

There is great emphasis on improving grain liquification efficiencies in the present scenario of the alcohol industry, which is looking at portable alcohol from varied grades & types of grains.

SolubAid AS improves the solubilization of starch at high temperature efficiencies.

SolubAid AS is a high temperature stable endo-amylase derived from a selected strain of *Bacillus licheniformis*. It is an extracellular enzyme which randomly hydrolyses alpha-1,4 bonds in amylose and amylopectins. Thus help in rapid reduction in wort viscosity & complete stabilization of grain starch.

SolubAid AS is a yellow coloured liquid with specific gravity of 1.10 to 1.2gms/ml, which is water soluble.

Application Conditions:

Optimum Parameter for jet cooking system using **SolubAid AS** is:

a) Slurry Preparation:

- I. **SolubAid AS** at 0.6-0.80kg per ton dry starch
- II. Free calcium: 70ppm
- III. pH: 4 – 4.5

b) Primary Liquefaction:

- I. Temperature: 104° C - 107° C (219° F - 225° F)
- II. Retention time: 5 min
- III. Flow rate as per the jet cooker specification.
- IV. Slurry pressure: 50 - 70 psi
- V. Back pressure: 10 - 20 psi.
- VI. Delta P across Jet: 30 - 40.

c) Secondary Liquefaction:

- I. pH = 4.0 - 4.5
- II. Iodine Staining: Light purple Brown.
- III. DE% = 16 – 20 in 90 - 120min
- IV. % DS = 20 - 25%.
- V. Temperature 80⁰ C - 90⁰ C

Storage Conditions and Packaging:

SOLUB AID AS must be stored at temp. 25±5° C and 35±5% humid conditions

It is best if used before 12months from date of manufacturing.

It is available in 25 kg HDPE cans.

All our products, conform to the standard FSSR, 2011 (The food safety and standard regulation, 2011 as amended by regulations, 2016)

The information contained herein is true and accurate to the best of our knowledge and is offered in good faith. Recommendations are to be optimized at every stage since the conditions and method of use, are specific and beyond our control.
