

PRODUCT DATA SHEET

PRODUCT	: GIST OENOFERM-W	
VERSION No.	: 1.0	DATE: 01-04-2021

Introduction:

GIST OENOFERM-W has been used in oenology since many years. Its fermentative abilities make out of it the ideal tool for difficult oenological conditions such as

- Highly clarified musts with a assimilable nitrogen deficiency.
- Musts from rotten grapes
- Musts highly contaminated by indigenous and undesirable yeasts and bacteria.

Moreover, this yeast can be used for the yeast addition of tanks in which the fermentation is stuck.

Finally, this yeast has also good results in bottle fermentation

Benefits:

1. **GIST OENOFERM-W** is sensitive to the competitive factor K2.
2. High tolerance to alcohol: superior to 18% of alcohol.
3. Short lag phase
4. Fast fermentation rate
5. Large fermentation temperatures range (optimal between 15 and 30° C)
6. Low requirement in assimilable nitrogen.
7. Low volatile acidity production: around 0.2 g/l eq(H₂SO₄)
8. Low production of H₂S
9. Average foam production

Dosage:

We recommend adding 20 – 40g of **GIST OENOFERM-W** to 100 L juice to obtain the optimum quantity of viable yeast cells. This ensures a good start of fermentation and dominance over the wild microorganisms.

Storage Conditions:

GIST OENOFERM-W MUST BE STORED at low temperature and dry place.

It is best if used before 24 months from date of manufacturing.

All our products, conform to the standard FSSR, 2011 (The food safety and standard regulation, 2011 as amended by regulations, 2016)
